URL Block List / Warning List

A data feed of 'raw' URL/IP adapt extracted principally from network activity logged during malware analysis. The URL/IP data from this list can be used as an emergency block list and/or warning list for filtering and alerting applications.

Threat Track

A data feed of fully-qualified malicious and unwanted URL/IPs in four categories:

- Adware / Clickfraud
- Pefile (direct links to portable malware)
- Phishing URLs
- Threat URLs

The Threat URLs are generated as a result of malware execution. This included URLs/IPs provided from BluePrint Data's URL Threat Center and our research partners and from URL/IPs that have been reported as malicious.

Threat Analysis Report

Detailed analysis reports of each malware sample scanned through BluePrint Data's URL Threat Center and partners sandboxes. These reports are available as an email XML feed. The volume of the daily reports range from 4k to 20k.
