Architecting a Safer Internet

BluePrint Data Provides Free Locally Installable OEM Internet Filtering Software

Jacksonville, Florida USA – Tuesday 10 April 2012 – OEM Internet Filtering provider and leader in high quality OEM internet content filtering solutions BluePrint Data is expanding its integration tools and utilities with the addition of a locally installable "Content Engine". The configurable software, provided free by BluePrint Data, enables companies to have a locally installable "URL Lookup" tool for a plethora of devices from local home or small business routers to network gateway appliances or data center servers. The free software requires a license to the BluePrint Data URL filter database.

The locally installable Content Engine works with BSD, Linux, OSX, and Windows operating systems (both clients and servers). BluePrint Data provides both the compiled product as well as the source code for easy of customization and modification. The Content Engine can be configured with a variable cache size from zero to a local copy of the full BluePrint Data URL Filter database. URL/web page lookups are directed to the Content Engine as HTML, JSON or XML requests and the Content Engine responds with one of the 66 categories BluePrint Data uses to classify web site content. Queries can be limited to a web site or domain or allow within web site domain information.

The Content Engine returns approximately 1,500 requests per second running on a standard "off the shelf" computer with a single processor and 4 GB of memory. The Content Engine works by looking for a requested URL in the cache (which can be either in memory or on disk) and returning the content information for the requested URL. If the information does not exist in the cache, information is retrieved in real time from the BluePrint Data Cloud URL Filter Lookup service and is cached locally. The Time to Live for the cached data is a configurable option.

 "BluePrint Data's addition of this tool furthers our support for companies that wish to add or replace OEM URL Content Filtering." said Bob Dahlstrom BluePrint Data's CEO. "These integration tools and utilities support the use of the BluePrint Data URL Filter database, the highest quality service available and proves again we offer the best quality OEM internet filter product and service available."

About BluePrint Data.

BluePrint Data OEMs its URL / Web site content filters, technology, and security products and services to Internet Security vendors such as Unified Threat Management (UTM), Managed Service Providers (MSP), Managed Security Service Providers (MSSP) and Software as a Service (SaaS) providers as well as providing private label / OEM services to Value Added Resellers (VARs), Information Technology Providers, Anti Virus and Anti Spam service providers, Independent Software Vendors (ISVs), and telecom, carriers, and ISPs and other companies. BluePrint Data has the world's largest 100% human reviewed URL Filter Database that is combined with tools and services to provide easy integration of the BluePrint Data OEM URL Filter database.
