BluePrint Data Cloud or Local Content Filtering

Mobile Systems, Tablets & Smart Phones

OEM Internet Web Content / URL Filtering

Special points of interest:

- BluePrint Data's internet content filer service can be deployed 100% in the cloud, 100% on the client or 100% in the network or any or any hybrid or virtual combination thereof

- Is your company a Telecom, ISP or Mobile Phone Network provider? Do your devices use MSISDN or other unique identifiers when accessing network services? If so let BluePrint Data work with you to provide Internet Content / Web site filtering.

- All our products and services come with our standard support which includes full contact information for our service and network technicians as well as an assigned project manager

- Support in the US is available Monday to Friday from 9 am to 5 pm Eastern Standard Time (UTC –5). Support in India is available Monday to Friday from 11 am to 7 pm India Standard Time (UTC +9). Both include a call back or e-mail / SMS / chat contact within 30 minutes.

- Contact us about our Premium Support options..

BluePrint Data categorizes web sites into content categories in 63 languages. This category information is available to our OEM partners via direct licensing of our database, or with various technologies to implement low-impact, scalable, and cost effective solutions for mobile systems including tablets and mobile phones. Our licenses include all software and database updates as well as 24/7 support.

BluePrint Data provides Internet Filtering solutions for Telecom's, ISPs and Mobile Phone Networks and the BluePrint Data's internet content filter service can be used with in-network installations to provide URL / Web Content Filtering service for mobile systems and smart phones without using any client software.

If you are already using a management product such as Afaria from Sybase or Accenture's Mobility Service, the BluePrint Data URL / Web site filtering database can be integrated into the network managing the mobile devices

For installation where the service provider cannot control the network traffic and route all http requests to an in-network solution offering Internet Filtering, Blue-Print Data can work with the provider to provide services for client based services

We can provide you our API's, SDK's, and web based tools to facilitate integration into your network for mobile phone, tablet or other device web traffic.

BluePrint Data has the world's largest 100% human reviewed URL Filter Database

The BluePrint Data system will include the appropriate BluePrint Data URL filtering database information and will block the following categories of web sites and content;

- Unlawful and Illegal content
- Obscene
- Pornography
- Gambling
- Sexual Explicit / Adult Sexual
- Anonymous Proxies
- Other optional or required categories

We understand the difficulty and complexities of providing Internet Filtering Services to mobile devices and systems and will work hard to provide you with the tools and utilities to ease the integration process.
