BluePrint Data Network Security

Network Gateway Security Devices—Firewalls, UTM, etc.

Special points of interest:

- For very large volume traffic devices such as those in use at an Internet Service Provider (ISP) we offer a Linux and Windows Server "Content Engine" optimized for high speed lookups and requests.

- For Network Gateway security devices such as Unified Threat Management or firewalls, we offer a locally installable configurable Linux or Windows Server "Content Engine". Options include adjustable cache size from full URL filter database to zero for maximum performance or minimal footprint allowing 100% of the cached URL filter database to reside in memory.

- For local area networks such as home or small office BluePrint Data offers a minimal client that can call to the cloud for each URL lookup or cache some URL Filter data locally. This option is especially competitive for cable companies; phone companies and others offering services such as a "triple play" which includes TV, Phone and Internet.

OEM Internet Web Content / URL Filtering

BluePrint Data categorizes web sites into content categories in 63 languages. This category information is available to our OEM partners via our locally installable Content Engine, direct licensing of our database, or with various technologies to implement low-impact, scalable, and cost effective solutions including direct deployment on network hardware. From appliances, large and small, to home network routers and devices. Our licenses include all software and database updates as well as 24/7 support.

BluePrint Data provides a locally installable "Content Engine" with our full URL filter database as well as a set of API's, SDK's, and Web based tools and utilities to assist in the integration of our URL filtering into your services.

At BluePrint Data, our goal is to enable our OEM partners to offer superior content and web filtering products and services at a remarkable value. We offer flexible licensing terms, a dedicated OEM support team, and a personal touch for an exact fit with hands on implementation when needed. We provide support and technical assistance throughout the life of the partnership.

BluePrint Data provides a set of API's, SDK's, and Web based tools to utilize our Internet Filtering service. In addition to a locally installable "content engine" we provide copies of the database in plain text for your local use, installation on network or client devices, or for your data center / network.

BluePrint Data provides Internet Filtering solutions for installation at any network point or location. From Network Gateway Security appliances such as Unified Threat Management (UTM) or firewalls, to wireless routers and small home network devices or any hybrid or virtual combination thereof and for any operating system from Windows Server to Linux, BSD and even "on chip" programming.

All our products and services come with our standard support which includes full contact information for our service and network technicians as well as an assigned project manager. Please contact us about our Premium Support options

BluePrint Data's OEM Internet Filtering supports embedded parental controls in residential households, Gateway Filtering at Enterprises, and extreme high volume Content Filtering at ISPs.
